Dear Mike,

My son and I race a drag car at a local drag strip. When we make a run the water temperature climbs to 220°F by the time we get the car back to the trailer. I had seen your demonstration of Militec at the place where I work and had purchased a bottle from you to give it a try. I poured 16 ounces of Militec in with 7 quarts of oil and after 2 runs the car's temperature went from the 220°F that it had been running down to 200°F and has stayed in that range ever since, even on the hottest part of the day. Your product really works and I have also told other racers about the results.

Thanks Again,

/s/

Allen Jones
