Friction Technology Pty Ltd

August 3, 2004

Dear Ben,

It has been one year since we began using Militec-1.

As you advised we added Militec-1 to our lubricating oils with the intention of reducing maintenance, protecting our plant and machinery during down time and against the harsh effects of working at sea.

I treated dive compressors, power packs, hydraulic packs, marine engines and diesel engines.

I am happy to report that I have had a much better run with my equipment and my maintenance time is down. The start up of diesel and marine engines has been a lot easier and they run smoothly. Nearly all the machinery and engines run quieter, which is a huge benefit while working on small barges and boats.

As I am now working offshore in the North West Oil and Gas Fields my dive spreads are stored in open storage facilities in Karatha and Onslo when not required off shore. When mobilizing I have come to appreciate the effects of Militec as my engines and compressors start easily without signs of internal corrosion and dry start up, especially after long storage time.

We have now made Militec-1 an integral part of our maintenance programs.

Yours truly,

Peter Sare
