Dear Bob:

Enclosed please find copies of the oil analysis that covers the last 18 months. Please take notice to what the Militec Additive has done for the oil in this one machine. As you review the analysis sheets, you will see that the copper content in this machine was very high, leading us to believe a major overhaul was not too far in the future.

After finding out about the Militec Additive and seeing the demonstration, we added two (2) ounces of the additive per quart of motor oil on November 29, 1994, when the machine was in being serviced. On the next oil change, we added one (1) ounce of the additive to the quart of motor oil and are presently adding one (1) ounce per quart every other oil change. As a result, the copper level has dropped to a point where we feel it is a safe level.

We are currently using the additive in all of our off road equipment. Not only in the engines, but in the differentials and final drives as well. Our over the road shop has also started using this product in its thirty truck fleet. We feel the time saved in downtime and the high cost of replacement parts is well worth the investment in the additive.

If I can be of any further help or you have any questions, please do not hesitate to call me at 717 263-4046.

Sincerely

/s/

Donald L. Fleagle
Landfill Operations Supervisor
